XMLmotor With Serial Key [32|64bit]

XMLmotor is an advanced and comprehensive software utility developed in order to provide you with an advanced method of automatically executing repetitive tasks, by making use of XML data files. Some degree of experience required The program is sufficiently simple to understand and work with, but it does require some experience in working with task scheduler, as some of the functions of XMLmotor might be a bit over a regular user's level of knowledge. This simple tool can execute over one thousand tasks on a single schedule, and you can create multiple schedules, comprising all sorts of tasks, ranging from file copying, folder synchronization, archiving, setting timestamps or making directories, to monitoring

file or folder changes, and numerous others. Schedule tasks, define patterns, and execute on remote systems. The 'Scheduler' enables you to input the preferred date and time of execution, at user-defined intervals of seconds, minutes, hours, days, weeks or months, according to your individual need. It can be run on certain weeks of a month or on particular months in a year, with the possibility of setting 'Start' and 'End' dates. Moreover, the 'Tasks Sequence' component allows you to choose the exact pattern in which all tasks should be performed. Additionally, XMLmotor lets you test the created sequence, meaning you can first perform a test run and make sure it meets your every need, before finalizing the process. XMLmotor features a Commandline Module that enables you to work with the application from a remote system. At the same time, this feature allows you to control the utility using your own scripts or apps. In case of task errors, the 'Email Notification' function can warn you of any occurring difficulty via one or several email
