A rotary loader is a kind of a device in which a rotary drum, constituting a housing for a body of a machine, is rotated in a confined space between a supporting structure and a fixed structure. The rotary loader is suitable, e.g., for conveying pulverulent and granular materials on a working surface of the drum. In the rotary loader, powdery or granular material is fed to the drum through an intake mouth or feed chute provided on the housing and is discharged through an output mouth provided on the housing, and the rotational operation of the drum is used to circulate or convey the powdery or granular material. In the rotary loader, it is frequently required to load the drum with powdery or granular material at a predetermined speed. In the conventional method of controlling the rotational speed of the rotary loader, the rotational speed of the rotary loader is detected by means of a speed detector, and a speed control signal having
